Homework 2: Course Homework Page

- On campus students need to establish a directory in which they can store web pages that will be delivered by USC's student web server. Complete instructions on how to do this can be found on Piazza Tip 7.
- Once this is completed, create a course home page using some random name, e.g. VWXYZ.html. You may use any tool or method you wish. This page will contain a table that will include links to all of your homework, as shown below:

Link to Homework #1	Link to Homework #2
Link to Homework #3	Link to Homework #4
Link to Homework #5	Link to Homework #6
Link to Homework #7	Link to Homework #8
Link to Homework #9	Link to Homework #10

- As you complete each homework assignment, you should add the URL to the appropriate location in the table. In this way the TA/grader can easily locate your homework assignments. If you have named your course home page VWXYZ.html, the grader will use this page to access all of your homeworks by typing the URL:

  http://www-scf.usc.edu/~loginname/VWXYZ.html

- **THIS ASSIGNMENT IS UNGRADED BUT REQUIRED**
